

adam robinson

SENIOR SOFTWARE ENGINEER

Providence, RI

adamrobinson.tech · github.com/aaddaamm · linkedin.com/in/adam-robinson-software · adam@adamrobinson.tech

SUMMARY

Senior software engineer with over a decade of experience across fintech, healthcare, and enterprise. Full-stack, backend-leaning — specializing in Rails, Node.js, and TypeScript. Embeds with existing teams, gets up to speed fast in complex codebases, and ships reliably. Daily user of AI-assisted development tools.

EXPERIENCE

MojoTech · Senior Software Engineer / Technical Lead

2015 – Present · Providence, RI

Delivered across dozens of client engagements as an embedded senior engineer and technical lead. Selected clients:

■ iCapital · Staff Augmentation / Senior Engineer · 2024 – present

Embedded on a large-scale alternative investment platform serving wealth managers. Expanded i18n support across static and database-backed content, co-designed a Rails service for bulk nominee investment processing, and led a component library migration (Supernova v1 → v2).

■ Healthcasts · Technical Lead · 2022 – 2024

Led platform modernization for a medical publishing company. Built a headless CMS publishing pipeline (Strapi + React), rebuilt AWS infrastructure, and delivered an Auth0 authentication overhaul unifying login across all platforms — unblocking a parallel AI initiative in the process.

■ Angi · Staff Augmentation / Senior Engineer · 2021 – 2022

Delivered across three separate codebases (HomeAdvisor, Handy, Angie's List) in a single engagement — Vue/Java, Rails/React, and Next.js/Contentful. Mentored a team of interns through their first fully shipped feature.

■ Shell Techworks · Software Engineer · 2018 – 2019

Built decommissioning tooling for end-of-life offshore oil platforms. Full-stack React/Node application. Used the Google Design Sprint process to compress scope and deliver MVP on schedule onsite in Boston.

Earlier clients include School of Motion, Amica Mutual, and AutoRaptor.

Beacon Mutual Insurance · Software Engineer

2013 – 2016 · Warwick, RI

Built backend systems for claims and policy management in a regulated, high-reliability environment. Designed financial transaction and payment processing systems with strong correctness requirements.

SKILLS

Backend TypeScript, Ruby, SQL, Elixir · Node.js, Ruby on Rails, Express, Phoenix

Frontend React, SvelteKit, Vue, Next.js

Cloud AWS · Vercel · GitHub Actions

Tools Git, Prisma, Strapi, Contentful, Auth0

AI GitHub Copilot, Claude, AMP (daily — VS Code / Zed)
